SSSFT Research Seminars

How to develop the research question for clinical research

By Dr Saeed Farooq

Tuesday 26th April 2016
1.00pm - 2.00pm

Theatre 3, Learning Centre, St George's

FREE seminar by SSSFT Research & Innovation department

Dr Saeed Farooq starts our 2016 R&I lunchtime seminar series on the subject of developing the research question. Dr Saeed Farooq is a Senior Clinical Lecturer at the Research Institute for Primary Care & Health Sciences, Keele University and an Honorary Consultant Psychiatrist based here at the Trust.

Summary

How many times have you thought this is a really interesting and challenging topic for research but then gave up because you were not sure how to start? If you have an enquiring mind, this must have occurred to you a number of times. The real challenge is how to convert an interesting clinical query into a proper research question.

Asking a proper research question is the most important step in any research. Too often research fails because of poorly developed research questions. If the research question is properly developed, it should be possible to conduct the research even with limited resources. In this talk, Dr Farooq will elaborate on how to develop a research question. This talk is based on Dr Farooq's experience of facilitating research methodology workshops and completing a number of clinical research projects over the years.

Audience

The talk will be suitable for all those who think they are too busy to do research, from consultants to nursing staff. ALL WELCOME!

To book a place, please contact Kate or Audrey in the R&I office:
